

#### Little Miss Muffet

Under the skillful hands of a devoted Swiss plantsman, the Shasta Daisy has taken on a new role, as exciting to the gardener as the nursery rhyme to a child. It has become a perfect bedding or border plant, a dwarf, compact "tuffet," growing only 12-15" high, forming round bushes. They cover themselves with medium sized flowers of pure white with yellow center during July and August. A hardy perennial, usually flowering the first season, and the first and only Dwarf Chrysanthemum Leucanthemum to be propagated from seed with full success. We proudly present it to America's best gardeners. New this year.

## SALVIA, Scarlet Sage

One of our most satisfactory summer blooming bedding plants, clothed in brilliant flower from early summer until frost. Always neat and attractive are the Salvias. One of the most enchanting color combinations we have seen was a planting in Copenhagen, Denmark, of Salvias Pink Rouge, Royal Purple, and White Fire, all being about the same height and habit, harmonizing beautifully.

**F1812A—PINK ROUGE.** A captivating, unique, new color, very hard to describe, might be called a fuchsia-pink, for it has a purplish cast to the pink tone. Extra dwarf, uniform, and very early to bloom. Pkt. (50 s.) 25c; Dbl. Pkt. 45c.

**F1814A—PURPLE ROYAL.** A fine 14 inch early flowering strain bears many flowers of a deep and very pleasing shade of royal purple. For a really beautiful, unusual and conversation promoting bed, plant Pink Rouge, White Fire, and Purple Royal together. Pkt. (50 s.) 35c; Dbl. Pkt. 65c.

**F1809A—WHITE FIRE.** The flowers are refreshing, sparkling, creamy white against the dark green of characteristic Salvia foliage and are borne abundantly all summer on compact, bushy, 14" plants. The color is better if grown in light shade. A rare and very lovely variety bred by Mr. Hansen in Copenhagen. Pkt. (50 s.) 35c; Dbl. Pkt. 65c.

**F1810A—TITANIA.** The plants are only 16" tall, but the red flower spike is longest and most heavily filled with bloom of all the Salvias. Brilliant scarlet. Pkt. (50 s.) 35c; Dbl. Pkt. 65c.

**F1829A—JUNE GLOW.** An early blooming variety which forms a mound shaped plant about 1 ft. high, much more rounded than most of the Salvias and in bloom for a long period of time. Brilliant scarlet. Pkt. (50 s.) 35c; Dbl. Pkt. 65c.

## Salvia Farinacea

Bushy plants with myriad, graceful, silver wands, clothed in blue. Fine half-hardy perennials treated as annuals; in flower from June to frost. Farinacea packets contain 200 seeds.

**F1818A—BLUE SPIKE.** A greatly improved strain with longer, very strong flowering spike, densely set with darker, more attractive blue flowers. Early and very free flowering. Pkt. 35c; Dbl. Pkt. 65c.

## GIANT TRUMPET DAFFODILS

**DAFFODILS OR NARCISSI**, are the first of the major garden flowers to bloom, doubly precious because they bring with them the joyful spring. Because so many of the hundreds of varieties of Daffodils so nearly duplicate others, we have chosen to offer, on these pages, a representative variety of each class and color. These have been chosen through study in our trial grounds and close cooperation with several leading Dutch and American growers. We can, without reservation, recommend each variety we offer as one of the best in its class.

**BEERSHEBA**. A magnificent Giant trumpet type of ivory white. Perfectly flat perianth, long trumpet beautifully flanged at the mouth.  
B1356N—3 for \$1.00; 5 for \$1.60; 10 for \$3.00; 25 for \$6.60; 50 for \$12.00; 100 for \$23.00.

**BROUGHSHANE**. A glorious pure white of immense size and perfect form. One of the largest Daffodils, it measures  $5\frac{1}{2}$ " across the heavily overlapped perianth with a trumpet to match  $2\frac{1}{2}$ " across at its widely flared, reflexed and fluted mouth. Exceptional texture makes it very durable. Robust growth, sturdy 2 ft. stems.  
B1362N—75c ea.; 3 for \$1.90; 10 for \$5.75.

**GARDEN QUEEN**. Extremely large (5" across) but in such perfect proportions that it is also one of the most graceful. The well rounded perianth is of lovely lemon yellow. The trumpet is deeper buttercup yellow and seems extra long, but is actually 2", with beautifully flared mouth. Heavy textured, long lasting, extra early with exceptional color, grace, size and bearing.  
B1390N—40c ea.; 3 for \$1.10; 10 for \$3.35.

**IRISH LUCK**. Perfection in every detail is here, from the flat, broad, well overlapped perianth to the trumpet of graceful proportions with slightly flaring, lightly scalloped edge. The color is smooth, solid, even; of the freshest yellow you've ever seen. A greenish cast gives it a touch of the "Blarney Stone." Superb texture, exceptionally long-lasting.  
B1409N—\$1.10 ea.; 3 for \$2.85; 10 for \$8.50.

## NEW PINK TRUMPET DAFFODILS

While calling this group "Pink" is taking a liberty—all are definitely pink toned, more prominently as they flower age. Regardless of one's interpretation of pink, they're all exquisite flowers you'll proudly display.

**PINK PUNCH**. Original color, pristine beauty unmatched by any other Daffodil. Remarkable, long slender cup is champagne beige-pink with  $\frac{1}{2}$ " crinkled edge of exquisite, unique deep red-dish pink. All is sharply focused by the 4" overlapping, rounded perianth of pure paper white with sparkling diamond dusted surface.  
B1368N—50c ea.; 3 for \$1.25; 10 for \$3.75.

**LOUISE DE COLIGNY**. Most graceful. Reflexing perianth of pure white tends to throw the neat apricot-pink cup into focus. It shows color immediately upon opening and is strongly fragrant.  
B1510N—3 for \$1.10; 5 for \$1.75; 10 for \$3.25.

**MABEL TAYLOR**. Most heavily ruffled and inspiring of all pink Daffodils, its big pure white, widely overlapping perianth is slightly crinkled in crisp effect. The trumpet-cup is creamy apricot, with edge of striking, bright coral pink, so luxuriantly ruffled and fluted it appears almost double.  
B1423N—55c ea.; 3 for \$1.40; 5 for \$2.25; 10 for \$4.25.

**PINK GLORY**. The "Orchid" of pinks. Pure white perianth, exquisite long trumpet opening pale yellow soon shading to lovely pink.

The huge perianth does not open out fully but seems to be protecting the exquisite massive, heavily ruffled trumpet of slightly deeper yellow. The trumpet is fluted for its entire length and the mouth is ruffled but does not flare. The foliage by itself is outstanding, being very broad and thick and standing straight, almost like that of an *Amaryllis*. Really spectacular.

# Fabulous New Bouquet Tulips

PRODUCED BY HOLLAND'S FINEST GROWERS

A whole bouquet from every bulb. Four, five and more dazzling tulips from a single stem, instead of the usual one! The effect they give in beds or borders is outstanding, for even when planted in a single row, they will furnish enough flowers for a really effective showing. When cut, a single plant provides an arrangement. They're fashionable too, for even the older varieties are still so new, they are not generally offered.

## Seven Brand New Bouquets

New clear colors, taller stems (all 28"), 3-5 or more uniform flowers makes each plant a bouquet, or an important part of the border. All of these New varieties bloom at the same time, uniform in height, uniform in size of flower and plant habit, so they are choice together.

**B1878N—KISS ME QUICK (BO-PEEP).** 28" Uniform ivory-white with deep ivory base and yellow anthers. The flowers are perfect, long lasting goblets, quite uniform in size.

**B1863N—GOLDEN FLEECE.** Golden yellow of uniform color with no markings. A very beautiful variety and in short supply.

**B1882N—MAHOGANY PRINCE.** Large flowers of uniform, deep mahogany. Inside very brilliant. Beautiful dark lilac-blue center. Very attractive.

# Flowers from SEED

*A223E Gro-Lamp 40-2 with 2 Gro-Lux Tubes*

## Controlled Light Makes Seedlings Grow Strong

Seedlings need much higher light intensity than full grown plants. A window often does not give enough light to grow strong seedlings, especially in the sometimes prolonged cloudy and rainy periods of early spring. When too little light is given, tall and spindly plants will result. Scientific studies and our own experiments proved that you can achieve the same ideal light conditions of a greenhouse in your own home by applying artificial light.

**The Lamp**—The lamp was designed by Park for growing plants. With its oversize reflector, the lamp provides the ideal light to keep your plants green and blooming without being near the window. It transforms any area, basement or room, into a greenhouse. You can germinate seeds and grow the tender young seedlings to sturdy garden size, watch as they burst forth into delicate blooms. A fine way to keep your house-plants beautiful and well displayed.

*A376E Gro-Lamp 20*

### PARK'S FLUORESCENT GRO-LAMP

Gro-Lamps with cool white fluorescent tubes are ideal for raising all young plants from seeds. Seedlings grow fast and sturdily to the right size for planting outdoors. The light of cool white tubes produces beautiful foliage plants throughout their lifetime. Flowering plants need some additional light after 2-3 months growing time. So to insure an abundance of flowers, add a small incandescent light bulb.

Fixtures made of galvanized metal, they cannot rust. Beautiful, two-tone color finish; snow white inside, antique black outside. Strong, adjustable light stand—tubes easily lowered to 8", raised to 24".

**A376E—GRO-LAMP 20** with one cool white fluorescent, 24" tube.....\$9.95 ea.

**A378E—GRO-LAMP 40** with one cool white fluorescent, 48" tube.....\$14.95 ea.

Park's double tube Gro-Lamps provide higher light intensities to grow more seedlings better. Tubes are spaced 8" apart, providing the most efficient, uniform light distribution possible.

**A231E—GRO-LAMP 20-2** with two cool white 20 watt tubes, 24" long.....\$13.95 ea.

**A232E—GRO-LAMP 40-2** with two cool white, 40 watt tubes, 48" long. This is the most efficient size we offer, provides the highest light intensities needed to grow the most sunloving plants. Right sized lamp for large growing areas. Simply place lamps side by side or end to end.....\$21.95 ea.

### NEW GRO-LUX FLUORESCENT TUBE

The Gro-Lux tube is a new fluorescent light source especially developed for growing plants. The tube emits more red and blue light rays which plants generally use more efficiently than other colors. This pale lavender light adds a glow to green and red colors, giving plants a sparkling appearance. Gloxinias and other Gesneriads bloom beautifully under Gro-Lux tubes. Bedding plants grow readily from seeds to garden size. The Gro-Lux tubes are the center of many experiments being conducted now.

The new Gro-Lux Fluorescent Tubes will fit Park's Fluorescent Gro-Lamps. To increase the efficiency of your Gro-Lamp, simply replace the white tube with the new Gro-Lux Tube.

**A220E—20 watt Gro-Lux Tube**..... \$2.65 ea.

**A222E—40 watt Gro-Lux Tube**..... \$3.15 ea.
